

Abound Solar announces agreements with two international firms.

May 14, 3:47 PM

Abound Solar, the Ft. Collins, Colorado company which manufactures thin film photovoltaic modules designed for commercial use, announced long term sales agreements with two German firms to supply them with photovoltaic panels.

Wirsol Solar, based in Baden Wurttemberg, is a leading full service provider of photovoltaic systems around the world. They have installed more than 2000 PV systems world wide and are looking to accelerate their deployment of multi-megawatt solar installations. The potential of the U.S. market has encouraged them to open a North American office in Ft. Collins to work collaboratively with **Abound Solar**.

Juwi Solar, based in Worrstadt, specializes in solar power, bio-energy, geothermal, wind and hydro power. They are a broad based energy concern which has grown from a two person operation focusing on wind farm technology to approximately 550 employees worldwide with "100% dedication to 100% renewable energies". They have installed over 1000 PV systems with a capacity of 250,000 KWp. They also have a local office located in Boulder, Colorado.

Both companies agree that **Abound Solar's** proprietary technology will allow them to rapidly expand into the growing market of solar photovoltaic installations.

The photovoltaic panels are produced at **Abound Solar's** Longmont production facility.
